WORK EXPERIENS

Front-End Engineer at Corpsoft.io

- September 2023 - now

 I design appealing interfaces, implement diverse logic and functionality in applications, create robust architectural solutions, integrate data, and collaborate closely with the backend team. I utilize various technologies, libraries, and approaches, maintain a cohesive style with designers, and apply flexible methodologies such as Scrum for process optimization. Additionally, I write API requests and implement various logic and functionality on the backend using the Laravel framework. I work with various libraries and handle database operations to ensure seamless integration and optimal performance. 🚀

Technologies: React, Next.js, JavaScript, Redux Toolkit, Tailwind css, Styled-Components, Rest api, Docker, PHP, Laravel, Frame Motion, Git, Responsive Design

Front-End Developer at Teampulse

- March 2022 - September 2023

I implemented the design from Figma using React + TypeScript and Styled Components, utilized Redux Toolkit and useContext for state management, actively used hooks and created custom ones, used libraries for form management and validation, and collaborated closely with the backend team. Creating API requests.

Technologies: React, TypeScript, JavaScript, Styled Component, RestFull API, Redux Toolkit, React Query, React Router, Intl, Chart.js, Responsive Design, unit-testing JEST, Animations, Git, Express

Front-End Developer at WEB STUDIO

- October 2021 - February 2022

I worked on building a landing page and flexible CRM system for online stores using React and Sass. This included form processing, user authentication and customer management, inventory tracking, and sales reports.

Technologies: React, Sass, React hook form, RestFull API, Responsive Design, React Router, Git ...
